BIOENERGY IS RENEWABILITY

Low environmental impact and environmentally friendly products

Industrial production has always had a very important impact on the planet, whether we are talking about production processes or products.

Producing boilers and stoves, as well as automotive or various machinery, means having an additional responsibility, means having an ethical approach starting from the design and up to the disposal of the product.

Finding solutions that integrate the search for products always more eco-friendly and with low environmental impact with everyday well-being, ease of use, advanced technology, beauty, is an integral part of our mission, as well as raising awareness of the public and sector employees towards an ever greater active awareness.

For this reason, we also ask our customers to install, feed and maintain the products in a suitable way, above all following the regulations, as well as to use them with attention and respect for the environment, just as we are committed to following targeted production rules, with low impact on the territory, on people and on the ecosystem.

Renewability means intelligent use of resources; on this planet, often suffering from waste, in addition to seeking new solutions, pursuing advanced technology, promoting renewable energy sources, reducing emissions, it is important to maintain, differentiate, recycle, for ethical savings.

The objective of Schuster products is, in line with the requirements of the most restrictive European standards, to help protect the environment as much as possible, significantly reduce combustion emissions including the production of CO₂, thus making heating with biomass fuel (wood, pellets, etc.) increasingly ecological, as well as safe and with maximum user comfort.

The term biomass indicates all those materials of organic / vegetable origin which, unlike hydrocarbons, have not undergone fossilization processes (unlike oil, coal or natural gas).

Why burn wood (or derivatives) and therefore trees and plants, instead of other fossil fuels?

Simple, nature itself shows us how it is possible to keep our system in balance.

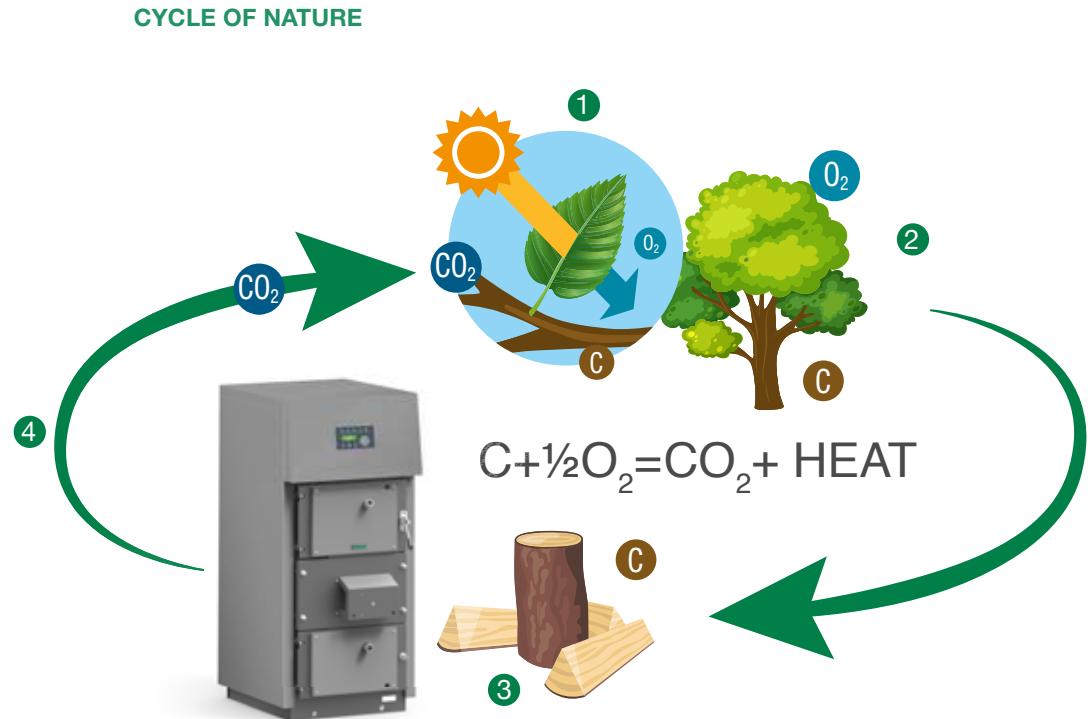

In fact, thanks to the mechanism of chlorophyll photosynthesis, the sun and plants ensure the right proportion of oxygen to the air we breathe.

Plants absorb carbon dioxide from the atmosphere (1), thus recovering carbon, necessary for their growth and, at the same time, they return oxygen, essential to our life and that of the planet (2).

During proper combustion, the carbon of the wood (3), combined with the oxygen in the air, produces the exact amount of carbon dioxide absorbed by the tree during its life cycle (4).

While fossil fuels are subject to depletion, wood, pellets and other wood products represent a renewable source of energy.

For this reason, installing a Schuster appliance running on pellets, wood or dual fuel is an "eco-friendly" choice, responsible towards our planet, while guaranteeing maximum comfort.

- 1 Chlorophyll photosynthesis: leaves absorb carbon dioxide from the atmosphere.
- 2 They recover carbon, their nourishment to live and grow, producing oxygen.
- 3 Wood obtained from trees is therefore a product of photosynthesis and is composed of carbon.
- 4 By burning wood (or derivatives) in the hearth, the carbon combines with oxygen and, thanks to the double combustion, releases the same amount of carbon dioxide that the tree had removed from the atmosphere to produce the wood.
- 5 The CO₂ emitted by the chimney is equal to the CO₂ absorbed by the plant. This is why it can be defined as "zero environmental impact".

REGULATIONS AND CERTIFICATIONS

**ECO
DESIGN
2020**

**ECO
DESIGN
2022**

The ECODESIGN regulation establishes the requirements and methods of application of Directive 2009/125 / EC of the European Parliament and the Council of the European Union, regarding the eco-design criteria for biomass appliances.

The objective of the regulation is to improve the environmental performance of new biomass heat generators and that is why, starting from its entry into force, only appliances capable of meeting the required efficiency and emissions limits can be marketed.

The regulation is mandatory and must be directly applied by each of the member States of the European Union starting from:

■ January 1st, 2020

for biomass boilers (EU Regulation 2015/1189)

■ January 1st, 2022

for biomass household appliances, such as:
stoves, fireplaces and kitchens (EU Regulation 2015/1185).

Product certifications

Schuster appliances are submitted to independent Notified Bodies for an evaluation, based on the strictest European laws. Subsequently, the Notified Bodies certify the product's high efficiency and low emissions, as required by various national and regional laws.

Conformity mark
to european normatives

EN 14785

European reference standard
for pellet fired stoves

EN 13240

European reference standard
for wood logs fired stoves

EN 13229

for inserts and fireplaces

EN 303.5

European reference standard
for solid fuels boilers

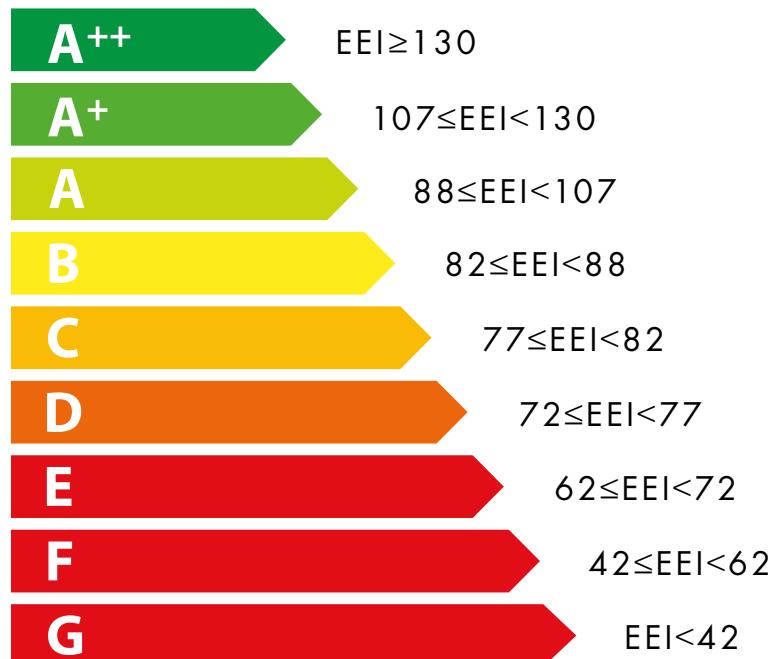

ENERGY LABEL

The European Energy Label provides consumers with accurate information on the energy consumption and performance of stoves, hydro-stoves, kitchens and boilers, both wood and pellet-fired.

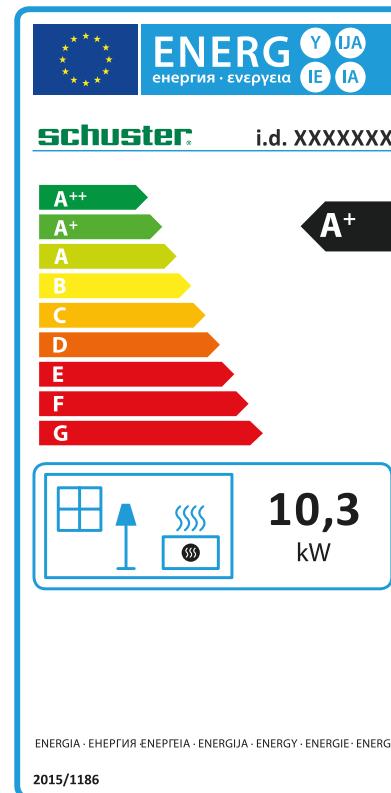

Schuster appliances are designed and built with a particular attention to energy saving, reaching and widely exceeding class A for most of the products.

As for household appliances, thanks to the Energy Label, the consumer can identify the energy characteristics of the product, such as:

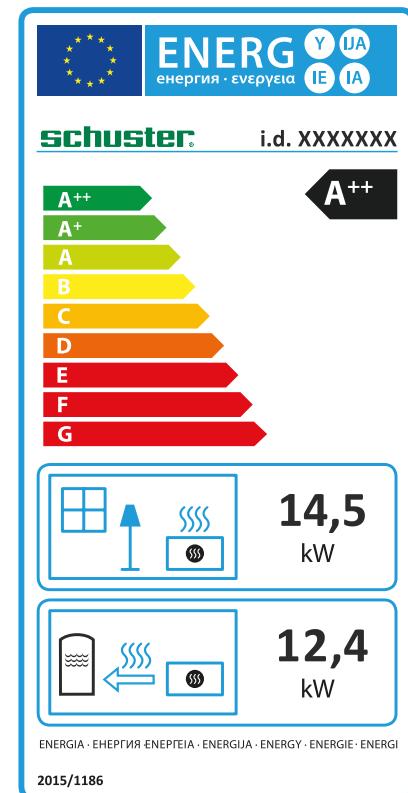

- The name or brand of the supplier and the model identifier;
- the energy efficiency class of the appliance, according to a scale ranging from G to A ++;
- the direct thermal power of the appliance, i. e. the nominal Output, expressed in kW.

ELECTRIC ABSORPTION (nominal / at ignition stage)	W	72 - 320
HEATING VOLUME	m³	440
NOISINESS	dB	35 / 50

Ventilated pellet hydro-stove equipped with an exclusive high-performance combustion system. IDRA 5S is at the top of Environmental Certification and with its 5 stars it allows access to the highest forms of incentives. The presence of "magic glass" and its linear style also make it elegant and versatile.

Ventilated pellet hydro-stove with steel cladding, equipped with an exclusive pellet dosing system which, thanks to the star shape with a sharp profile of its distributor, allows the quantity of fuel to be delivered precisely. The automatic brazier cleaning system is innovative and effectively simplifies the operations.

BOILERS

Schuster pellet-fired boilers can be **combined with other renewable energy sources** to heat the house. Solar panels, radiant floor systems, DHW storage tanks, heat pumps, control systems are easily connected to ensure maximum performance and optimized consumption according to the user's needs.

For specific needs it is available **even in the version only heating:** MINORCA GTR.

SYSTEM DIAGRAM WITH PELLET-FIRED BOILER FOR HEATING AND DHW PRODUCTION WITH EXTERNAL BUFFER AND CONNECTION TO SOLAR PANELS

These schemes are purely indicative. The thermo-hydraulic system must be built according to the regulations in force and equipped with all the control / safety accessories.

Compact pellet boiler equipped with an exclusive high-performance combustion system. The large three-pass smoke heat exchanger favours high efficiency. The innovative automatic brazier cleaning system, and the presence of an ash compactor, ensure high performance for long days by reducing cleaning operations. With the 5 stars obtained in the Environmental Certification, the MAIORCA GTA boiler accesses the highest incentives.
